

Astronomy

Merit Badge Workbook

This workbook can help you but you still need to read the merit badge pamphlet.

This Workbook can help you organize your thoughts as you prepare to meet with your merit badge counselor

Merit Badge Counselors may not require the use of this or any similar workbooks.

You still must satisfy your counselor that you can demonstrate each skill and have learned the information. You should use the work space provided for each requirement to keep track of which requirements have been completed, and to make notes for discussing the item with your counselor, not for providing full and complete answers.

If a requirement says that you must take an action using words such as "discuss", "show",

"tell", "explain", "demonstrate", "identify", etc, that is what you must do.

No one may add or subtract from the official requirements found on Scouting.org.

The requirements were last issued or revised in 2022 • This workbook was updated in November 2023.

eyes:	
Describe the pro	oper clothing and other precautions for safely making observations at night and in cold weather.
Night:	
Cold Weather:	

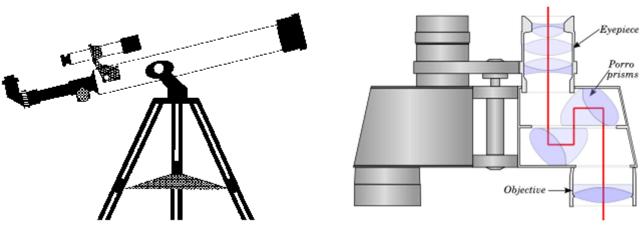

b. Explain first aid for injuries or illnesses such as heat and cold reactions, dehydration, bites and stings, and damage to

d. Explain how to safely observe the Sun, objects near the Sun, and Solar Eclipses.

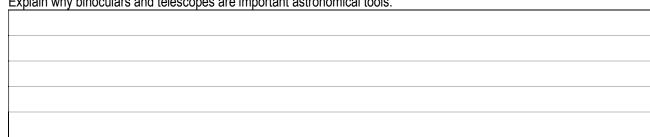

2. Explain what light pollution is and how it and air pollution affect astronomy.

3. With the aid of diagrams (or real telescopes if available), do each of the following:

Explain why binoculars and telescopes are important astronomical tools.

Demonstrate or explain how these tools are used.

b. Describe the similarities and differences of several types of astronomical telescopes, including at least one that observes light beyond the visible part of the spectrum (i.e., radio, X-ray, ultraviolet, or infrared). Explain the purposes of at least three instruments used with astronomical telescopes. Describe the proper care and storage of telescopes and binoculars both at home and in the field. 4. Do the following: a. Identify in the sky at least 10 constellations, at least four of which are in the zodiac. 1. 2. 3. 4. 5. 6. 7. 8. 9. 10.

c. Describe the motion of the planets across the sky.

Describe the motion of the planets across the sky.						

d. Observe a planet and describe what you saw.

Obscive a	planet and describe what	you saw.

- 6. Do the following:
 - a. Sketch the face of the Moon and indicate at least five seas and five craters. Label these landmarks.

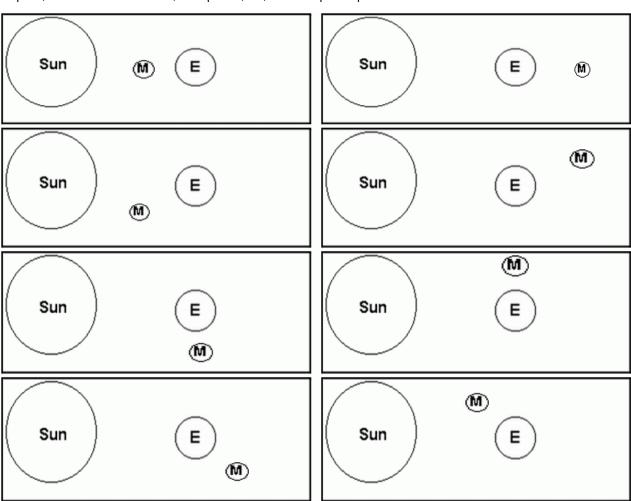

b. Sketch the phase and position of the Moon, at the same hour and place, for four nights within a one week period.

c. List the factors that keep the Moon in orbit around Earth.

iot the factore that Reep the Meer in orbit areand Earth.	

d. With the aid of diagrams, explain the relative positions of the Sun, Earth, and the Moon at the times of lunar and solar eclipses, and at the times of new, first-quarter, full, and last-quarter phases of the Moon.

Editor's Note: These diagrams can be used to show the relative positions of the Sun, Earth, and Moon during the new, first-quarter, full, and last-quarter phases of the Moon as well as during the Waxing Gibbous", "Waning Gibbous", "Waning Crescent", and "Waning Crescent" phases of the Moon (which is not required for the merit badge). Two of the diagrams can be used to show the positions both for a phase of the Moon and during an eclipse.

7. Do the following:

a. Describe the composition of the Sun, its relationship to other stars, and some effects of its radiation on Earth's weather and communications.

Composition:

Relationship to other stars:

Effects on Earth's weather:

Effects on communications.

b. Define sunspots and describe some of the effects they may have on solar radiation.

Effects:

4. Celestial objects you observed.

b.	Plan and participate in a three-hour observation session that includes using binoculars or a telescope. List the celestial objects you want to observe, and find each on a star chart or in a guidebook.
	delication expected you want to asserve, and into each on a star chart of int a gardescent.
	Prepare a log or notebook. Discuss with your counselor what you hope to observe prior to your observation session. Review your log or notebook with your counselor afterward.**
	** To complete this requirement, you may use the Scout Planning Worksheet at: http://troopleader.org/wp-content/ uploads/2016/03/512-505_16_Wksht_WEB.pdf.
C.	Plan and host a star party for your Scout troop or other group such as your class at school. Use binoculars or a telescope to show and explain celestial objects to the group.
d.	Help an astronomy club in your community hold a star party that is open to the public.
e.	Personally take a series of photographs or digital images of the movement of the Moon, a planet, an asteroid or meteoroid, or a comet. In your visual display, label each image and include the date and time it was taken. Show all positions on a star chart or map. Show your display at school or at a troop meeting. Explain the changes you observed.
